

## METER SAFETY

Installed electric meters and cooperative services seldom need to be moved. But if a situation arises, you or your contractor needs to contact the cooperative. We will assist so work can be done safely. No one should make repairs or access an Adams Electric meter without first contacting the co-op.

- Before any work begins that may affect your electric service or meter, contact Adams Electric.
- If co-op equipment needs to be worked on, a lineman will safely disconnect power so work can be performed. Contractors should call the co-op to schedule an appointment.
- Any time a meter base, main breaker or service panel is replaced or relocated, Adams requires an electrical inspection to be completed by a certified inspection agency. Following an approved inspection, the cooperative will reconnect power to your equipment.

All requirements are to keep members, contractors and Adams' employees safe. Failure to follow these requirements could result in fees and fines.

# YOUR ELECTRIC METER MEASURES YOUR ELECTRICITY CONSUMPTION AND COMMUNICATES THAT CONSUMPTION TO THE CO-OP OVER THE POWER LINE ITSELF. IT IS NOT A WIRELESS DEVICE. REMEMBER:

- Never block the meter or access to the meter base.
- Never cut the metal tag on the meter base and let the co-op know if the tag has been cut or is missing.
- Don't enclose the meter in any type of cabinet or locked container.
- Keep the meter installed at a level where it can be easily viewed.
- Don't relocate the meter inside a building. Adams may need access to the device without entering your home or business.
